Winemaking	Harvesting of the grapes is made manual, at technological maturation, after they have been selected from the vineyard. After that they are transported to the wine cellar with tipper trucks. Run must be being fermenting in stainless steel tanks after selective yeast inoculation, at the temperature of 14°C, for 14 days. Maturation is made in stainless steel tanks for 4 – 6 months, by the contact of the wine with the fine yeast, for improving organoleptic traits and color intensification. Conditioning and treatment have been limited to minimum, for not losing something that God put into the grapes.
